

Microwave Career Award

For a Career of Leadership, Meritorious Achievement, Creativity and Outstanding Contributions in the Field of Microwave Theory and Techniques.

Eliot D. Cohen

Eliot Cohen's engineering career began at the Naval Research Laboratory in 1963 where he performed research on microwave devices and circuits. Between 1989 and 1995, he was the DARPA Director for the Microwave and Millimeter Wave Monolithic Integrated Circuits (MIMIC) Program. Under the MIMIC Program, the capabilities, infrastructure and knowledge necessary to design and produce GaAs MMICs with high yield, at low cost and possessing performance and reliability characteristics required for military and commercial system applications were realized. Eliot is an IEEE Life Fellow, Past-President of MTT-AdCom, IEEE 3rd Millennium Medal recipient and member of the Space Technology Hall of Fame.
