

Xun Gong Statement

I have been a faculty member for 15 years and involved in chapter activities for 13 years. Promoting microwave education among students and membership development through chapters, conferences and publications will be my primary interest if I were elected as an AdCom member. Particularly, the efforts in the global MTT-S related educational materials development are critical for microwave community and attracting students to study microwaves. My international background gains me advantages in promoting MTT-S in global environments. However, addressing the stagnant growth of members in North America will still be my focus. I believe that effectively connecting MTT-S members in academia, industry and government is the key factor to promote education, employment and conference and can assist microwave practitioners with continued education. I sincerely wish that I can play important roles in AdCom when critical discussions and decisions are made in those areas.
